ABSTRACTED-PUB-NO: KR2004027854A

BASIC-ABSTRACT:

NOVELTY - A transaction settlement system performing electronic settlement by confirming a bill through the symbolic characteristic image information is provided to proof the ordered contents and store the information data by omitting a procedure to input the information such as a characteristic number or an approval number for settlement confirmation.

DETAILED DESCRIPTION - A buyer(10) and a provider(20) transact business with each other through a communication network such as an Internet communication network(50) and a wireless communication network or a sky wave broadcasting network(60). The goods transaction is performed by receiving a payment approval from a payer (40) such as a mobile communication company or a credit card company through a transaction relay server (30) verifying the price settlement and relaying the transaction fact. A bill screen used for the electronic settlement is transmitted/stored in a portable communication terminal of the buyer after merging a background screen and the order contents included as the text information, and generating a characteristic bill number used as a recognition code of the bill.
